

Ventilation Checklist

Name:	
School:	
Unit Ventilator/AHU No:	
Room or Area:	Date Completed:
Signature:	

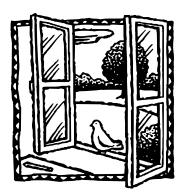

Instructions

- Read the IAQ
 Backgrounder and
 the Background
 Information for
 this checklist.
- 2. Keep the
 Background
 Information and
 make a copy of
 the checklist for each
 ventilation unit in your
 school, as well as a
 copy for future
 reference.
- 3. Complete the Checklist.
- Check the "yes,"
 "no," or
 "not applicable"
 box beside each
 item. (A "no"
 response
 requires further
 attention.)
- Make comments in the "Notes" section as necessary.
- 4. Return the checklist portion of this document to the IAQ Coordinator.

1. OUTDOOR AIR INTAKES

1a.	Marked locations of all outdoor air intakes on a small floor plan (for example, a fire escape floor plan)	 No	N/A
1b.	Ensured that the ventilation system was on and operating in "occupied" mode		
AC'	FIVITY 1: OBSTRUCTIONS		
1c.	Ensured that outdoor air intakes are clear of obstructions, debris, clogs, or covers		
1d.	Installed corrective devices as necessary (e.g., if snowdrifts or leaves frequently block an intake)		
AC'	FIVITY 2: POLLUTANT SOURCES		
1e.	Checked ground-level intakes for pollutant sources (dumpsters, loading docks, and bus-idling areas)		
1f.	Checked rooftop intakes for pollutant sources (plumbing vents; kitchen, toilet, or laboratory exhaust fans; puddles; and mist from air-conditioning cooling towers)		
1g.	Resolved any problems with pollutant sources located near outdoor air intakes (e.g., relocated dumpster or extended exhaust pipe)		
AC'	TIVITY 3: AIRFLOW		
	Obtained chemical smoke (or a small piece of tissue paper or light plastic) Confirmed that outdoor air is entering the intake appropriately		
2.	SYSTEM CLEANLINESS		
AC'	TIVITY 4: AIR FILTERS		
	Replaced filters per maintenance schedule		
2b.	Shut off ventilation system fans while replacing filters (prevents dirt from blowing downstream)		
2c.	Vacuumed filter areas before installing new filters		
	Confirmed proper fit of filters to prevent air from bypassing (flowing around) the air filter		
2e.	Confirmed proper installation of filters (correct direction for airflow)		

	2SYSTEM CLEANLINESS (continued)			
2f. 2g.	Ensured that drain pans slant toward the drain (to prevent water from accumulating) Cleaned drain pans Checked drain pans for mold and mildew		No □ □	N/A
	Ensured that heating and cooling coils are clean			
2j.	Ensured that the interior of air-handling unit(s) or unit ventilator (air-mixing chamber and fan blades) is clean		<u> </u>	
21.	Checked mechanical room for unsanitary conditions, leaks, and spills Ensured that mechanical rooms and air-mixing chambers are free of trash,			
2111.	chemical products, and supplies			
3.	CONTROLS FOR OUTDOOR AIR SUPPLY			
	Ensured that air dampers are at least partially open (minimum position)			
3b.	Ensured that minimum position provides adequate outdoor air for occupants			
ACI	TIVITY 9: CONTROLS INFORMATION			
3c.	Obtained and reviewed all design inside/outside temperature and humidity requirements, controls specifications, as-built mechanical drawings, and controls operations manuals (often uniquely designed)			
ACI	TIVITY 10: CLOCKS, TIMERS, SWITCHES			
	Turned summer-winter switches to the correct position			
	Set time clocks appropriately Ensured that settings fit the actual schedule of building use (including			
51.				
	TIVITY 11: CONTROL COMPONENTS			
	Ensured appropriate system pressure by testing line pressure at both the occupied (day) setting and the unoccupied (night) setting			
3i.	Replaced control system filters at the compressor inlet based on the	_		
	compressor manufacturer's recommendation (for example, when you blow down the tank)			
3j.	Set the line pressure at each thermostat and damper actuator at the proper level (no leakage or obstructions)			
ACI	TIVITY 12: OUTDOOR AIR DAMPERS			
	Ensured that the outdoor air damper is visible for inspection			
	Ensured that the recirculating relief and/or exhaust dampers are visible for inspection			
3m.	Ensured that air temperature in the indoor area(s) served by each outdoor air damper is within the normal operating range			

NOTE: It is necessary to ensure that the damper is operating properly and within the normal range to continue.

3.	CONTROLS FOR OUTDOOR AIR SUPPLY (continued)				
3n.	Checked that the outdoor air damper fully closes within a few minutes of shutting off appropriate air handler	Yes □	No □	N/A □	
30.	Checked that the outdoor air damper opens (at least partially with no delay) when the air handler is turned on				
	If in heating mode, checked that the outdoor air damper goes to its minimum position (without completely closing) when the room thermostat is set to 85°F	ロ			
•	If in cooling mode, checked that the outdoor air damper goes to its minimum position (without completely closing) when the room thermostat is set to 60°F and mixed air thermostat is set to 45°F	ロ			
31.	 If the outdoor air damper does not move, confirmed the following items: The damper actuator links to the damper shaft, and any linkage set screws or bolts are tight. 				
	 Moving parts are free of impediments (e.g., rust, corrosion) Electrical wire or pneumatic tubing connects to the damper actuator 	ロ			
	The outside air thermostat(s) is functioning properly (e.g., in the right location, calibrated correctly)				
Pro	ceed to Activities 13–16 if the damper seems to be operating properly.				
	FIVITY 13: FREEZE STATS				
3s.	Disconnected power to controls (for automatic reset only) to test continuity across terminals				
3t.	Confirmed (if applicable) that depressing the manual reset button (usually				
	red) trips the freeze stat (clicking sound indicates freeze stat was tripped)				
3u.	Assessed the feasibility of replacing all manual reset freeze-stats with automatic reset freeze-stats				
NOTE: HVAC systems with water coils need protection from the cold. The freeze-stat may close the outdoor air damper and disconnect the supply air when tripped. The typical trip range is 35°F to 42°F.					
AC:	FIVITY 14: MIXED AIR THERMOSTATS				
	Ensured that the mixed air stat for heating mode is set no higher than 65°F	ロ			
3w.	Ensured that the mixed air stat for cooling mode is set no lower than the room thermostat setting				
ACTIVITY 15: ECONOMIZERS					
	Confirmed proper economizer settings based on design specifications or local practices				
NO	TE: The dry-bulb is typically set at 65°F or lower.				
3у.	Checked that sensor on the economizer is shielded from direct sunlight	ロ			
3z.	Ensured that dampers operate properly (for outside air, return air, exhaust/relief air, and recirculated air), per the design specifications				
NOTE: Economizers use varying amounts of cool outdoor air to assist with the cooling load of the room or rooms. There are two types of economizers, dry-bulb and enthalpy. Dry-bulb economizers vary the amount of outdoor air based on outdoor temperature, and enthalpy economizers vary the amount of outdoor air based on outdoor temperature and humidity level.					

3. CONTROLS FOR OUTDOOR AIR SUPPLY (continued)

AC.	IIVIII 16: FANS			
3aa	. Ensured that all fans (supply fans and associated return or relief fans) that move outside air indoors continuously operate during occupied hours (even when room thermostat is satisfied)	Yes □	No	N/
	TE: If fan shuts off when the thermostat is satisfied, adjust control cycle as nure sufficient outdoor air supply.	necess	ary t	o
4.	AIR DISTRIBUTION			
AC'	TIVITY 17: AIR DISTRIBUTION			
	Ensured that supply and return air pathways in the existing ventilation system perform as required			
4b.	Ensured that passive gravity relief ventilation systems and transfer grilles between rooms and corridors are functioning	□		
	TE: If ventilation system is closed or blocked to meet current fire codes, confessional engineer for remedies.	isult w	rith a	
	Made sure every occupied space has supply of outdoor air (mechanical system or operable windows)			
4d.	Ensured that supply and return vents are open and unblocked	□		
	TE: If outlets have been blocked intentionally to correct drafts or discomford correct the cause of the discomfort and reopen the vents.	t, inve	stiga	te
4e.	Modified the HVAC system to supply outside air to areas without an outdo air supply			
4f.	Modified existing HVAC systems to incorporate any room or zone layout and population changes	□		
4g.	Moved all barriers (for example, room dividers, large free-standing blackboards or displays, bookshelves) that could block movement of air in the room, especially those blocking air vents	ロ		
4h.	Ensured that unit ventilators are quiet enough to accommodate classroom activities	□		
4i.	Ensured that classrooms are free of uncomfortable drafts produced by air from supply terminals	□		
AC'	FIVITY 18: PRESSURIZATION IN BUILDINGS			
mai	TE: To prevent infiltration of outdoor pollutants, the ventilation system is deintain positive pressurization in the building. Therefore, ensure that the system exhaust fans, is operating on the "occupied" cycle when doing this activity	em, in		ng
4j.	Ensured that air flows out of the building (using chemical smoke) through windows, doors, or other cracks and holes in exterior wall (for example, floor joints, pipe openings)	□		
5.	EXHAUST SYSTEMS			
	TIVITY 19: EXHAUST FAN OPERATION Checked (using chemical smoke) that air flows into exhaust fan grille(s)	ロ		
If fo	 ans are running but air is not flowing toward the exhaust intake, check for the Inoperable dampers Obstructed, leaky, or disconnected ductwork Undersized or improperly installed fan 	ıe folle	owing	g:

• Broken fan belt

5. EXHAUST SYSTEMS (continued)

ACTIVITY 20: EXHAUST AIRFLOW

	TE: Prevent migration of indoor contaminants from areas such as bathroon s by keeping them under negative pressure (as compared to surrounding spa		chen	s, and
5b.	Checked (using chemical smoke) that air is drawn into the room from adjacent spaces		No □	N/A □
	nd outside the room with the door slightly open while checking airflow high or opening (see "How to Measure Airflow").	and l	ow i	n the
5c.	Ensured that air is flowing toward the exhaust intake	. 🗖		
AC'	TIVITY 21: EXHAUST DUCTWORK			
5d.	Checked that the exhaust ductwork downstream of the exhaust fan (which is under positive pressure) is sealed and in good condition	.□		
6.	QUANTITY OF OUTDOOR AIR			
AC'	TIVITY 22: OUTDOOR AIR MEASUREMENTS AND CALCULATION	s		
NO	TE: Refer to "How to Measure Airflow" for techniques.			
6a.	Measured the quantity of outdoor air supplied (22a) to each ventilation unit	. 🗖		
6b.	Calculated the number of occupants served (22b) by the ventilation unit under consideration	. 🗖		
6c.	Divided outdoor air supply (22a) by the number of occupants (22b) to determine the existing quantity of outdoor air supply per person (22c)			
AC'	TIVITY 23: ACCEPTABLE LEVELS OF OUTDOOR AIR QUANTIT	IES		
6d.	Compared the existing outdoor air per person (22c) to the recommended levels in Table 1	. 🗖		
6e.	Corrected problems with ventilation units that supplied inadequate quantities of outdoor air to ensure that outdoor air quantities (22c) meet the recommended levels in Table 1	. 🗆		

NOTES
